## SistelQualita foundation

---

SISTELQUALITA was founded on 4th September, a new company through which Qualita has expanded its presence nationally.

For this new business challenge, Qualita has considered it a strategic viability to be able to count on a partner that is widely recognised in the area, and thanks to its sales infrastructure, provides them with a more widespread presence and ability to cover the needs of this extensive market. In this sense, Sistel has offered high added-value technological solutions in management material, technology and infrastructures since 1989. Among its many competitive advantages are its solidness and service capacity, as well as its compromise towards clients' projects.

The basis for establishing this alliance between Sistel and Qualita has been their shared vision, not only regarding business philosophy, but also their way of interpreting business relationships with clients. That is why SISTELQUALITA can count on the support and experience of its partners, as well as a clear and contrasted definition of its business model.
